* priority in css in the file

Importance of css priority in the file

The priority of css rule is important because it determines which styles are applied to an element when there are conflicting rules or multiple css applied to a single element

css order of priority

1) inline
2) internal
3) external

* Introduction to css selector

css selector are used for selecting the html elements that you want to style, and they are a fundamental part of working with css in theory, selectors are pattern used to select the elements to which a set of styles will be applied. css selectors can be used to select elements based on their type, class, ID, attributes, or dynamic state or positions.

Types of CSS Selectors

We can divide css selectors into five categories:

1. Simple Selectors
2. Combinators
3. Attribute Selectors.
4. Pseudo - class Selectors.
5. Pseudo - element Selectors

Note : css selectors cannot be used with Inline css.
